

Attorney Docket No.: PRIN-0064
Inventors: Charles Gilvarg
Serial No.: 09,402,405
Filing Date: October 4, 1999
Page 2

January 25, 2001. Please enter the following amendments into the record.

In the Claims:

1. (amended) A method of enhancing sensitivity and specificity of an assay measuring enzymatic activity in a sample comprising measuring enzymatic activity in the sample [in the presence and absence of] and comparing the measured enzymatic activity to any activity measured in a blank containing the sample and a specific inhibitor of the enzymatic activity to correct for extraneous changes in measurement unrelated to enzymatic activity of the sample.

2. (amended) A method of measuring carboxypeptidase A levels in a biological fluid comprising:

(a) contacting a biological fluid with a carboxypeptidase A substrate in the presence and absence of a carboxypeptidase A specific inhibitor; and

(b) measuring changes in optical density resulting from hydrolysis of the carboxypeptidase A substrate by carboxypeptidase A in the biological fluid in the presence and absence of the carboxypeptidase A specific inhibitor, wherein the presence of the carboxypeptidase A specific inhibitor corrects for an extraneous
